

WEBSITE OVERVIEW & IMPROVEMENTS

What's on the site, and what we improved.

A summary of the refreshed Juba Consultants website — its pages and content, the design system, the media, and everything improved in this round of work. Now live on GitHub Pages.

Driving Innovation. Building Capacity. Transforming Futures.

Prepared for: Juba Consultants (Pty) Ltd

Prepared by: Lubelo Tech Solutions

Date: 26 June 2026

LIVE · DEPLOYED

1. At a glance

Item	Detail
Live site	https://lubelo20.github.io/JUBA/
Repository	github.com/Lubelo20/JUBA (branch main)
Stack	Static HTML + CSS + vanilla JavaScript — no framework, no build step
Deploy	GitHub Pages (source main / root) — every push to main auto-deploys
Brand	Navy #0B2E6D · Navy-dark #071d45 · Gold #C9A34E · Poppins
Positioning	Skills Development · AI · ICT — "Driving innovation. Building capacity. Transforming futures."

Note: the public domain **jubaconsultants.co.za** is a separate, older build and is **not** served from this repository. Pointing it at this new site needs a custom-domain + DNS step (see section 7).

2. Site map — what's on each page

Navigation: Home · About · Services ▾ (Skills / AI / ICT) · Incubation · Gallery · Contact

Home

- Hero with a **mock JUBA LMS dashboard** (learner view: progress ring, KPI cards, course list, upcoming session) — pure CSS/SVG, labelled as a preview.
- About teaser, services preview (cards link to the three divisions), Who We Serve, mission strip, a "Life at Juba" photo band, and a closing call-to-action.

About

- Intro + founder card (Sinenhlanhla Khathi) + trust badges.
- Core values band (7 values) on a navy-overlaid **photo background**.
- Vision & Mission cards, a 5-step "Our Approach", Areas of Operation (7 provinces), and the team.

Services hub

- The three divisions as image cards, plus secondary offerings: Business Incubation, Organisational Capacity Building, Bursary Facilitation.

Division pages

- **Skills Development & Training** — learnerships, skills programmes, short courses, corporate training, SDF consultancy; trading as KZN Project Management; SETA & QCTO aligned.
- **AI Breakthrough** — AI education, solution creation, tool application, community deployment, emerging tech.
- **ICT & Technology Solutions** — development services + training tiers (ages 8–16 to enterprise) + Notable Projects (Corundum, Project LMS, Mentor Management System, JubaSkillsDevelopment Platform).

Incubation

- Startup readiness, business-model refinement, compliance support, digital enablement, operational structuring, growth mentoring.

Gallery

- Masonry photo grid (15 curated photos, lightbox) + a video section (5 short clips).

Contact

- Address, phone, director, departmental emails (general, training academy, director, technical director), WhatsApp button, and an enquiry form.

3. Design system

- **Warmer, more human feel:** softer rounded cards, gentle shadows, warm-tinted sections, real photo bands woven in.
- **Reusable components:** dropdown nav, gradient banner heroes, feature lists, offer cards, hub cards, project cards, mission strips, photo splits/strips, the LMS dashboard mock, email cards, WhatsApp button.
- **Accessibility:** inline SVG icons (no icon CDN), focus-visible states, ARIA labels, scroll-reveal that respects reduced-motion.
- **Responsive** across desktop, tablet and mobile.

4. Media

- Event photos and videos were **curated, optimised and renamed** descriptively and live in `images/gallery/`.
- Loose source files were **archived locally** to `images/originals/` (git-ignored — kept on disk, not in the repo).
- Gallery videos were **compressed** for the web; the 9-minute session recording was **trimmed to a 25-second highlight** (31 MB → ~4 MB).

5. What we improved

1. **Content migration** — brought the richer live-site content into the multi-page design with all specifics (programmes, trading name, projects).
2. **New pages & navigation** — added Skills, AI and ICT division pages and a dedicated Incubation page; turned Services into a hub with a dropdown nav.
3. **Warmer, more human design** — rounded cards, soft shadows, photo bands, mission strips.
4. **Home LMS dashboard mockup** — replaced the static "Core Expertise" panel with a product-style JUBA LMS preview.
5. **About page rebuilt** from the company profile (vision/mission, 7 values, approach, areas of operation, team) and re-balanced the intro layout.
6. **Core-values band** given a navy-overlaid photo background.
7. **Contact** — added departmental emails + WhatsApp; fixed a stale fallback email in the JavaScript.
8. **Gallery** — switched to a masonry layout so portrait photos display fully; refreshed photos and videos.
9. **Media housekeeping** — curated, optimised, renamed, archived originals, compressed videos, trimmed the long clip to a highlight.
10. **Copy** — replaced "Black female owned" with "Proudly South African".
11. **Shipped** — committed and pushed to main; deployed to GitHub Pages and verified live.

6. Tech & deployment

- **No build step / no dependencies.** Preview locally with `python3 -m http.server 8000`.
- Nav and footer markup are duplicated across pages — keep them in sync when editing.
- GitHub Pages serves from **main** / root; pushing to main redeploys automatically (~1 minute).

7. Suggested next steps

- **Custom domain:** point `jubaconsultants.co.za` (or a subdomain) at GitHub Pages — add the domain in Settings → Pages, add a CNAME file, and create the DNS records.
- **Contact form:** set the real Formspree endpoint in `contact.html` (currently a placeholder) so enquiries are delivered.
- **Social links:** the footer LinkedIn / Facebook / X icons point to "#" — add the real profile URLs.
- **LMS link:** when the real JUBA LMS is online, link the hero mock and the ICT "Access LMS Portal" CTA to it.
